

# Air Cleaner Helps Family Get Healthy and Medication-free

Mother and daughter had great problems with hay fever, allergies and eczema.

However, after just a few days of using an air cleaner made in Denmark, the entire family went medication-free and everyone could finally enjoy a good night's sleep.

**Randi Schuster and her husband had to get up several times at night in order to check on their little daughter. Just as her mother, 2-year old Laura suffered from hay fever and asthma and also struggled with child eczema, all of which resulted in a lot of medication and several severe coughing fits every night.**

Today things look completely different for the family from Hammel.

Everyone can now enjoy a good night's sleep and both Randi Schuster and her daughter are as a whole medication-free. The mother is very certain about the reasons behind this: *"I found out that we could purchase an air cleaner from Air-Tech, which could resolve our problems. If I have to be honest, I was a bit sceptical because people are always trying to sell all kinds of things. So the dealer gave me a non-binding period of 14 days to try the air cleaner. Already after a day or two, we could notice a difference, and today we don't take any medication at all,"* she says.

## **Good Bye to Being Ill all the Time**

The family of four used to live in a house full of mould. As a result, both Laura and her elder brother aged four were sick all the time and had earache, runny nose, ugly cough and pneumonia. The mould forced the family to move to another place, but it had already accumulated in the furniture. The air cleaner, Jimco MAC500, was their salvation, because it sterilises the air. *"It has been an enormous relief – both physical and mental. I have not used my asthma inhaler for several months now and Laura's eczema is gone,"* says Randi Schuster, who also saves money because she no longer has to buy medication.

Her husband and she couldn't be happier. The air cleaner has chased the sickness away and has helped increase their budget. The entire indoor climate has improved, the air no longer feels "heavy" and both children and parents feel better. *"I can see that my children are already happier. First and foremost, Laura is no longer ill all the time. Both my children laugh more every day,"* says Randi Schuster.

She is very impressed that the air cleaner can be so helpful given that it is no bigger than a shoe box. *"It is on all the time, but this is not something we will notice in our electricity bill. It has fully lived up to what we have been promised, and much more. That's why I recommend that people with asthma or COPD buy an air cleaner,"* says Randi Schuster.

## **Eliminates Bacteria and Prevents Infection**

Kirsten Larsen from AIR-TECH, which distributes this Danish-manufactured air cleaner, says that the device eliminates bacteria and pollen and prevents diseases such as influenza, for example. This is probably the reason why the Schuster family no longer suffer from any diseases. *"People want to have a nice indoor climate and our technology has been awarded the Danish EU Environmental Prize. This air cleaner is sold in 17 different countries and is used by thousands of households, companies and institutions all over the world,"* says Kirsten Larsen.
