

Air Purifiers Provide a Helping Hand to 430,000 Danish COPD Sufferers

In connection with the 2012 International COPD Day, all Danes with emphysema get the opportunity to try out an air purifier that can help them get rid of coughing and using inhaled medications.

According to the Danish Lung Association, 430,000 Danes suffer from Chronic Obstructive Pulmonary Disease – better known as COPD or emphysema – and each year, the disease causes over 6,000 deaths in Denmark. Since the recent 2012 International COPD day, where also people all over Denmark got the opportunity to learn more about the lungs, the dealer Kirsten Larsen has offered all Danes the opportunity of trying out the air purifier MAC 500 with the option to return the product if it does not live up to expectations. According to her, the MAC 500 has already helped numerous patients in Denmark and abroad get rid of coughing and derived muscle pain.

– The interest for the air purifier is overwhelming because it can make a positive difference for COPD sufferers, asthmatics, allergy sufferers and others with breathing problems. The technology, which is patented by Jimco of Denmark, has received the EU Environmental Award and is applied all over the world, she says.

Got Rid of Coughing and Medicine

48-year-old Jonna Nielsen is among the Danes who have already been helped by the air purifier. Although she has smoked most of her life and has not yet stopped, she does no longer feel much like a COPD patient. The heavy coughing and derived muscle pain have gradually disappeared.

- My hairdresser uses an air purifier for preventing the harsh hair products from causing a bad indoor climate in her salon. She told the same machine has helped others get rid of breathing problems as well as asthmatic and allergic reactions, and she believed that the air purifier would also be able to help me, says Jonna Nielsen, who despite her scepticism purchased two MAC 500 air purifiers which are each the size of a shoebox.

Never Again Coughing Attacks at Home

After putting the air purifiers into use, Jonna Nielsen quickly noticed an improvement. – *Coughing diminished in strength, and the derived muscle pain subsided. All in all, I felt much better and had more energy. In the course of six months, the coughing attacks completely ended, and today I can hardly feel that I have COPD, the Dane says.* Today, she only uses medications when going away from home for several days without bringing an air purifier.

Ms Nielsen also welcomes that the air purifiers have improved indoor air quality and reduced smoke nuisances. – *The air feels clean and fresh, and we no longer experience a strong smell of smoke when entering the house or sniffing our clothes. Most importantly, the children are not bothered as much by smoke as before.*

To Be Tried Out Without Obligation

Kirsten Larsen of AIR-TECH is now giving other COPD sufferers the possibility of trying out the MAC 500 without obligation. – *Almost all COPD patients who try it feel a difference within two to three days. Therefore, the rest of the year we offer all customers the opportunity of returning the product within eight days of purchase. If the user does not get significantly better within that time, the air purifier can be sent back without obligation and we will refund the full price of DKK 3,490 ex VAT. Our experience is that the vast majority of COPD sufferers who try an air purifier get so much better that they certainly do not want to do without it, she explains.*
